

Relativity[®]

TRIDENT PRO™ INTEGRATION

Trident Pro powered by Wave Software seamlessly integrates with kCura's web-based review platform, Relativity. Trident Pro provides the fastest, most accurate e-discovery pre-processing technology.

INTEGRATION

Wave Software, a kCura Independent Software Vendor (ISV), integrates Trident Pro with Relativity to offer best-of-breed technology in a fully-integrated all-in-one solution. Trident Pro for Relativity gives legal teams a clear picture of the type and volume of data that exists in a discovery collection. At this stage of pre-processing, only potentially relevant data is mapped from Trident Pro to Relativity where case teams can then begin review.

ACCELERATED PROCESSING

The speed of integrated processing combined with enhanced analytic capabilities will allow reviewers to quickly cull and assess data with items pre-grouped, metadata parsed out and placed into the appropriate fields, and the documents ready for review and production without any additional processing. Users can process 1GB of data in as little as ten minutes, perform front-end de-duplication, and automatically map and load e-discovery data via the Native Review Bridge for Relativity, which eliminates the need for load files or manual data import.

IMPROVED ANALYTICS

Beyond pushing Electronically Stored Information (ESI) processed by Trident Pro directly into Relativity and removing the need for load files, the integration provides improved analytics for the review team by including a bundled Relativity case template that makes use of Trident Pro's rich metadata extraction. Examples of improved analytics include duplicate groups, near duplicate groups, keyword hit reporting, documents grouped by file type, and e-mail domain groupings.

WHY TRIDENT PRO AND RELATIVITY?

Wave Software's Trident Pro filters and culls native file discovery data, including foreign language documents, PSTs, NSFs, MSGs and loose files. Trident Pro then loads these results directly into Relativity, completely removing the need to create load files and manually import processed data. Relativity is a powerful and easy-to-use review platform. Features include an interface that is almost completely customizable between users and groups, a flexible workflow component, the ability to TIFF on the fly, powerful searching that includes concept searching and clustering, and world-class scalability, giving Relativity the power to handle the industry's largest and most complex reviews.

ADDITIONAL BENEFITS OF TRIDENT PRO

- Reduced software costs
- Reports made easy
- Easy software download and upgrades
- Tech support help desk

RECOMMENDED TECHNICAL REQUIREMENTS FOR TRIDENT PRO

- OS: Windows 2000 SP4 / XP / Server 2003 SP1 / Vista (with UAC disabled) with .NET 2.0 framework
- Office Suite: Microsoft Outlook 2000 / XP (2002) / 2003 2007, Lotus Notes Client Version 7.0
- Hard Disk Accessible Data: All PSTs must be accessible from local hard drive or network share
- CPU: Intel Celeron 2.2 GHz or better; Data bus speed 400 MHz or better
- Memory: Cache Memory Size of 256 KB or better; 512 MB RAM or better
