

Relativity®

Developer Program

Relativity is the extensible e-discovery platform that allows developers to design and build their own applications.

Overview

The Relativity Developer Program is designed for litigation support professionals, independent consultants, and third-party software providers who want to extend the functionality of Relativity, create new solutions, or seamlessly integrate other software products. With Relativity, business analysts and software engineers can design applications that enhance the existing review, analysis, and production features in Relativity, offer new functionality, or provide extended e-discovery support by addressing a different stage of the EDRM.

Support

Upon joining the Relativity Developer Program, new developers receive a development instance of Relativity, the tools to build applications on top of Relativity, code samples, technical support, and more.

Applications

Litigation support professionals, independent consultants, and third-party software providers can create native applications on top of Relativity. Building these applications does not require any programming knowledge or additional technology. Relativity license holders and third-party groups may design these applications to enhance the review, analysis, and production capabilities in Relativity or to act as standalone applications that solve additional litigation support challenges.

APIs

Third-party software providers can leverage Relativity's APIs to build seamless integrations with the review, analysis, and production functionality in the platform. Powerful integrations provide users with the advantage of choosing from best-in-class applications to meet their needs, while delivering the benefit of an all-in-one experience.

What if I'm already a license holder?

Current Relativity license holders interested in joining the Relativity Developer Program can receive supplementary tools and information that will assist in the application-building process at no charge.

For more information about joining the Relativity Developer Program and getting your product listed on the Ecosystem page of the Relativity website, please contact advice@kcure.com.

“ Relativity gives us the tools to design, build, and integrate highly customized applications that push the boundaries of current e-discovery workflows. ”

Steve Ankenbrandt
Co-Founder and President
